pancetta, caramelized onion

CROW'S BENCH

Of bears
and berries.

The state fruit for this fabulous place called Idaho is none other than the humble huckleberry. Incredibly fickle to home cultivation, the huckleberry thrives in wild environments (kind of like Schweitzer folks) and grows extremely well in our state thanks to Idaho's rich volcanic soil and high altitudes. Huckleberries have a very short growing season – mid July to mid-August – so competition for these gems is fierce.

Luckily, there are plenty to find on Schweitzer's slopes in the summer so the local bears and us human interlopers can have plenty to share! Curious to learn more about huckleberries? Stop by the Activity Center where our crew can tell you more about this amazing fruit and where to find them on the mountain in our summer season.
